On The Origin of Species - Evolution and Adaption

This term our science will be focusing on Charles Darwin's theory of evolution and adaptation. In school we will be carrying out an experiment, learning about the theory and writing a biography about Charles Darwin.

This half term we would like you to create a project that helps explain Darwin's theory in more detail and in a way that anyone can understand.

You will need to think carefully about how you do this, making sure that you explain any scientific words that you use and provide pictures or diagrams that are clear and easy to interpret.

Your project should include:

- basic information about Charles Darwin
- key dates about his discoveries
- an explanation of his theory
- pictures and diagrams to help explain

This time we would like your project to be in one of the following formats: a poster, an evolution based game, a video or a model.

Remember: copying and pasting will not help you learn more. Make sure any information you gather is written in your own words. If you need any help or advice then ask your class teacher, or any member of the Year 6 team and they will guide you.

This project is due in on the 9th December 2016.
